Gymnasium Management System

Our proposed Gym Management System is for those who run a gymnasium business. Here we have designed the model for a chain of gymnasiums at different locations that come under a central management.

We examined carefully about how to make a system without failure as well as different functions for different kind of user depending on their membership type. The Gym Management requires a system that will handle all the necessary and minute details easily through a proper database that stores data about members, employees, products, payments, personal training programs, group training programs and all amenities that are provided in the Gymnasium.

Application Description:

In out Application we have selected 9 basic entities for conceptual model design. Each Gymnasium will have a Manager to head the gym and employess like cleaner, IT Staff, Security etc who work under the manager. Each Gymnasium have basic facilities like equipments and also extra amenities that can be used by upgrading their membership through paying extra money. each member will get a member kit on becoming a member of the gym. Trainers can be opted for by the members who conducts both group fitness class and also Personal training for the needed members.

Important assumptions about the Application:

- Members must register for joining the gym. On successful joining they receive a member kit which provides the member privileges like the unique user login id, the type of membership and the payment option. It also has an additional feature known as add guest that gives the member the privilege to add one of his/her acquaintance as a new member to the gym with no fee.
- Through a basic membership the member gets access to use the gym equipment's any day with no time limit for usage. For using the amenities like swimming pool, Zumba dance coaching, Squash, yoga centre, spa etc they must pay extra and change the membership type to the one according to their requirement. For a Gold membership they can use 1 amenity. For a Platinum membership they can use 2 amenities and for a Diamond membership they can use more than 2 amenities.
- Gym also provides both group fitness class and personal training as two separate categories with a personal trainer.

Business Rules for the Conceptual Model:

- A gymnasium must be managed exactly by one manager.
- A Manager can manage exactly one gym.
- A manager must manage at least one employee.
- An employee must have only one manager.
- A gymnasium can provide one or more amenities.
- An amenity (or amenities) can be provided by one or more gyms.
- An amenity can be used by none or any number of members.
- One Member must use only one-member kit.
- Only one-member kit is available to a member.
- A member can opt for none or many trainers.
- A trainer must have at least one member assigned.
- A trainer must give personal training to at least one member.
- A Personal Training program must have one and only one trainer.
- A trainer can conduct one or more group fitness classes.
- A Group fitness class must only be conducted by exactly one trainer.

Assumptions for the ER Diagram:

Assumptions for Gym Management System:

- Gym Type refers to whether it womens,mens or a unisex gym. Each of these gyms could have one or more amenities.
- Amenities include one or many of the following: swimming pools, squash, table tennis etc and members pay extra to avail these.
- We are not considering gym equipment as a part of the management system because every registered member gets to use all the equipment for free and has no other constraints.
- Every gym will have exactly one manager.
- Employees can be non -training staff who take care of IT, logistics and infrastructure.
- Member can use the gym facility without registering for any of the group fitness classes or personal training.
- Trainer will be hired when at least one member has registered for personal training or group fitness class.
- A Group fitness session is managed only by one trainer.

The Relational Model

| 1. | Manager: [Manager_ID, Manager_Name, Email, Gym_ID (FK)] |
|-----|--|
| 2. | Employee: [Employee ID, Employee_Name, Contact, Role, Manager_ID (FK)] |
| 3. | Gymnasium: [Gym_ID, Gym_Type, Location] |
| 4. | Provide: [Gym ID, Amenity ID, Provide ID (Concatenation of Gym ID and Amenity ID)] |
| 5. | Amenities: [Amenity ID, Type, Capacity] |
| 6. | UsedBy: [Amenity ID, Member ID, UsedBy ID (Concatenation of Amenity_ID and Member_ID)] |
| 7. | Members: [Member ID, Name, MemberShip_Status, Login_ID (FK)] |
| 8. | MemberKit: [Login ID, Payment, Membership_Type, Add_Guest] |
| 9. | OptFor: [Member ID, Trainer ID, OptFor ID (Concatenation of Member_ID and trainer_ID)] |
| 10. | Trainer: [<u>Trainer_ID</u> , Trainer_Name, Skill] |
| 11. | PersonalTraining: [Program ID, Program_Name, Fitness_Level, BMI, Trainer_ID (FK)] |
| 12. | GroupFitnessClass: [Group_ID, Group_Size, Activity_Name, Trainer_ID (FK)] |
| | |

Rules Applied to the Relational Model:

- Manager relation has Manager_ID as the Primary Key and Gym_ID as Foreign Key derived from Gymnasium relation. (1:1 relationship).
- Gymnasium relation has **Gym_ID** as the Primary Key.
- Employee relation has Employee_ID as the Primary Key and Manager_ID as Foreign key derived from Manager relation. (1: M relationship).
- Amenities relation has Amenity_ID as the primary Key.
- Created a relation for Provide. Provide relation has Gym_ID and Amenity_ID as its
 attributes obtained from Gymnasium and Amenities relations (M: N relationship) and
 Provide_ID as the Primary Key obtained by concatenating Gym_ID and Amenity_ID.
- Created a relation for UsedBy. UsedBy relation has Amenity_ID and Member_ID as its attributes obtained from Amenities and Member relations. (M: N relationship) and UsedBy_ID as its Primary Key obtained by concatenating Member_ID and Amenity_ID.
- Members relation has Member_ID as the Primary Key and Login_ID as Foreign Key taken from MemberKit relation. (1:1 relationship).
- MemberKit relation has Login_ID as the Primary Key.
- Created a relation OptFor. OptFor has Member_ID and Trainer_ID as its attributes
 obtained from Members and Trainer relations (M: N relationship) and OptFor_ID as the
 Primary Key obtained by concatenating Member_ID and Trainer_ID.
- Trainer relation has Trainer_ID as the Primary Key.
- GroupFitnessClass has Group_ID as the Primary Key and Trainer_ID as the Foreign Key derived from Trainer relation. (1: N relationship).
- PersonalTraining has Program_ID as the Primary Key and Trainer_ID as the Foreign Key relation from Trainer relation. (1: N relationship).

Database Implementation

1. Manager Table:
